Sixth graders at
High Plains Elementary

Students watch "The Making
of Portland Cement"

The 2003 Concrete 101 Program Makes Learning Fun!

Teachers, students and administrators are asking for the program. We have educated over 400 kids in the last year alone. These kids leave with the knowledge of how Portland cement is made, where it is used in the community, and what makes cement different from concrete.

The program is fun, easy to teach and provides useful information for the kids (and hopefully, their parents), in the various communities where these classes have been held.

Once again, there is no cost for you to put on the program. We make up the materials, teach the course and return for the beam strength testing day.

Classes (2 separate days) have been conducted at these schools just since January 1st.
