"Lincoln Public Schools - Box Lunch"
Topic - Concrete Pavement Analyst Software

The NC&AA hosted a lunch and learn for the Lincoln Public Schools. We introduced the Life-cycle cost approach to understand the design criteria and costs associated with concrete vs. asphalt. The group consisted of LPS superintendents, BVH Architects, Sinclair Hille Architects, Sampson Construction, and Cheever Construction. With all parties involved with 3 future Lincoln Public Schools "in design".

The twist to this boxed lunch is that the NC&AA distributed copies of the Hastings Middle School blueprint (an actual project in the bidding process) and went through a real analysis of the project that Sampson Construction has a contract to execute. With hopes to have the same opportunity on the Hastings Job as well.

Know of any opportunities in your town? Call the Association and let us help you.
