Papillion Creek Watershed Project

The Association presented a “Pervious Concrete” presentation to the Papillion Creek Watershed Users Group. Organized by Marian Maas, who received a grant from the EPA to educate and preserve the Papillion Creek. This meeting was the first of its kind with lots of focus on pervious surfaces to minimize storm water runoff and storm water pollution. The audience ranged from farmers and local residence to city/county officials.

It was a great feeling to see such passion from the public on environmental impacts of new developments and sustainable futures.
