*"AIA Western Chapter – Box Lunch"
Topic – Pervious Concrete*

The Nebraska Concrete & Aggregates Association hosted a boxed lunch in Kearney for the American Institute of Architects (Nebraska)– Western Chapter. The topic was Pervious Concrete. As some of these designers may have already seen past ‘pervious concrete’ presentations, we were focused on discussing: Why pervious concrete will work in the Midwest. The presentation showed most, if not all, of the pervious projects in the Midwest and showed some details on making this Storm Water Management System work. We also tried to disprove some perceptions on pervious concrete in regards to Freeze/Thaw durability, clogging, and raveling.

The Association would like to thank Wes Cunningham for cooking the Burgers and for letting us use his facilities. This was a great Lunch and Learn.
