WESTERN ENGINEERS CLUB “CONCRETE OVERLAYS”

The NC&AA and the NCPA teamed up to promote concrete overlays. With a rise in the cost of asphalt and environmental concerns, concrete overlays have been a hot topic this year. The NC&AA spoke on whitetopping parking lots and the NCPA spoke on design and construction of concrete overlays on streets and roads.

Highlights of the presentation:

- Evaluating existing pavements to determine if they are good candidates for a concrete overlay
- Selecting the right overlay system for job specific pavement conditions
- Managing concrete overlay workzones under traffic
- Accelerating construction of concrete overlays

In the past, pavement rehabilitation has usually defaulted to the typical “mill and fill” approach. It is the NCPA and NC&AA’s goal to make sure designers and owners consider concrete overlays as a **sustainable** solution to rehabilitating existing pavements.

Special thanks to the NC&AA President, Brian Engle, for the opportunity to present to the western engineers club.
