Volume 9

Ray Wagner responds to a question from the audience.

City of Beatrice personnel, NPPD, Norris Public Power District and Local Contractors were all on hand to learn about Flowable Fill.

## **Beatrice Concrete Hosts Flowable Fill Presentation/Demonstration**

On May 14, Beatrice Concrete hosted a Flowable fill Demonstration. The sixty people that signed up included representatives from NDOR, Nebraska Public Power District, Norris Public Power District, City of Beatrice and some local contractors. The nice weather kept a small number from attending; yet, overall, it was a great turnout.

The key to the strong attendance was the recruiting effort done by Ray Wagner, Paul Kostal and the rest of the staff at Beatrice Concrete. The NC&AA produced the flyers and Beatrice Concrete sent them to key people in their area. Follow-up calls were then made.

Lunch was furnished for the attendees and Ernie Peterson and Ray Wagner presented the information and answered questions from the group. We then all went outside to where three separate blocks were brought in. The blocks had varying strengths and ranged from structural fill to excavatable fill. The attendees were encouraged to dig into the various blocks. This emphasized the fact that Flowable fill is not like concrete in terms of wanting to see continuing strength gains. Load bearing yet still excavatable is what most in attendance were needing in the public works field. Ray and his guys showed that they can deliver it.
